SEARAILS kits have been designed to be simple to assemble “blank” painting canvasses. All components in SEARAILS kits have extraordinary amount of detail molded into their surfaces.

Most SEARAILS kits are single resin castings. For example, there are only three pieces in the SEARAILS Tugs or Towboats; hull, superstructure and pilot house overhead. These castings only require minimal cleaning and painting to finish.

Some SEARAILS ships kits require assembly of very few single resin castings with extraordinary amount of detail molded into their surfaces. Compare the four superstructure parts to the finished painted superstructure assembly below (SRK-4 Stack and Antennae added).

Assembly of SEARAILS kits requires only the sanding, gluing, and painting of the individual pieces.

Most assembly pieces have posts and holes, or tongues and grooves to assist alignment. All pieces have extreme detail which may be painted and weathered to

SRK-2 Superstructures

the desired level of satisfaction.

Additional detail is available including etched brass railings, ladders and gangways. Portholes and bulkhead doors are also available.

Box 366, Valley Ford, CA 94972

SEARAILS Tanker (Crude Carrier) for model railroads

A finished waterline model of an oil Tanker proportionately scaled for N or Z scale harbors.

Modeled after generic VLCC tankers (Very Large Crude Containers), the Tanker represents a Crude Carrier serving petroleum depots at dockside.

Actual 30" x 5.5" can be shortened by simply cutting a midships section from the cast resin hull and piping distribution system.

SEARAILS C8 Intermodal Container Ship

SEARAILS manufactures finished models of waterline C8 intermodal container ships. The C8 serves marine terminals linking trucks and trains to markets around the world.

SRS-6 and SRS-8 are both undecorated Car Ferry kits with Docks.

“SRS-6” is a two track ferry with Pilot Houses fore and aft, and optional side wheel compartments (not shown). This ferry uses the two-track dock as a slip with brass elevator housings.

“SRS-8” includes a four track RR-Car float managed by a Towboat Tug and the piers and pilings for the four track-two switch RR Dock.

Available as undecorated kits, both may be ordered as painted and weathered finished modules as special orders with delivery schedules of four weeks.
